TITLE	Maryland Accountability Testing Program Annual Report. School Year 1985-1986.
INSTITUTION	Maryland State Dept. of Education, Baltimore.
PUB DATE	3 Sep 86
NOTE	134p.; Prepared with the assistance of Westat, Inc. For a previous report, see ED 256 791.
PUB TYPE	Reports - Evaluative/Feasibility (142) -- Statistical Data (110)
EDRS PRICE	MF01/PC06 Plus Postage.
DESCRIPTORS	*Academic Achievement; *Accountability; Achievement Tests; *Basic Skills; Educational Legislation; Elementary Education; Elementary School Mathematics; Grade 3; Grade 5; Grade 8; Language Arts; Reading Comprehension; *State Programs; Testing Programs; *Test Results
IDENTIFIERS	*California Achievement Tests; *Maryland Accountability Assessment Program

ABSTRACT

The Maryland Accountability Testing Program Annual Report is a reference document on basic skills test data for the public, providing a survey of test results and the progress made by state students in grades 3, 5, and 8. Basic skills areas for these grade levels are covered, along with average grade equivalent scores. The California Achievement Tests (CAT) were used to meet the legislative mandate for accountability. Detailed tables of the test results by school, district, and state are provided. A definition of educational accountability, a description of the Maryland Educational Accountability Program, and state and local level accountability assessment information are presented. Maryland students in grade 3 performed above national samples from 1976 in reading comprehension, language skills, and mathematics. Fifth and eighth graders also exceeded national norms for all these tests. (SLD)

September 3, 1986

To the Honorable Harry Hughes, Governor of Maryland, and Members of the Maryland General Assembly:

I am pleased to submit this annual report on Maryland's Educational Accountability Program in compliance with the Annotated Code of Maryland, §7-203.

We are once again encouraged by the test results shown in this report for the school year 1985-86. As you will see, the results at each grade level in reading, language, and mathematics demonstrate that the average Maryland youngster is performing well above the national norm. The continuing trend of advancement in achievement results of the past six years is an encouraging indicator of our improved educational program.

The development and operation of the program and the publication of this report were dependent on your support and the extensive efforts by state and local educators, parents, and the students themselves. To all concerned, especially teachers and other school level staff, we extend our thanks.

Sincerely,

DAVID W. HORNBECK
State Superintendent of Schools

DWH:jan

ACKNOWLEDGEMENTS

The Maryland Accountability Testing Program Annual Report is published annually by the Maryland State Department of Education. The 1985-86 edition was organized and supervised by SAEED SALEHI. RICHARD MCKAY was the consultant and MARGARET DONLEY was the departmental editor. LINDA BAKER, BERTHA GORMAN and KATHLEEN HIATT provided educational statistics information. The publication was prepared and distributed with the assistance of Westat, Inc. NAOMI EVERETT was Westat's project manager and editor.

We thank the many contributors to this volume, notably the Testing and Accountability Coordinators of Maryland's twenty-four educational agencies who were the source of school level data presented here.

MARYLAND ACCOUNTABILITY TESTING PROGRAM ANNUAL REPORT OVERVIEW

The Maryland Accountability Testing Program Annual Report is a reference document on test data for the public. It provides a survey both of test results and of the progress being made by students attending Maryland public schools in grades 3, 5, and 8.

FEATURES OF THE REPORT

- A definition of educational accountability and an introduction to the Maryland Educational Accountability Program;
- State and local level accountability assessment information; and
- Appendixes:
  - Public Law, §7-203 -- the Maryland Educational Accountability Program
  - State Board of Education's Resolution on Assessment Program
  - Maryland prerequisites for graduation
  - A description of the assessment instruments used to measure academic achievement

STATEWIDE TEST RESULTS

The California Achievement Tests (CAT), administered for the first time in the fall of 1980, replaced the Iowa Tests of Basic Skills (ITBS) as the standardized achievement tests used to meet the legislative mandate under Public Law §7-203 -- Educational Accountability Program.

In this report, basic skills areas for three grade levels are covered, along with average grade equivalent scores (G.E.). Included are reading comprehension, language, and mathematics scores for grades 3, 5, and 8.

The following major findings from analyses of the statewide results indicate how well the participating Maryland pupils did in the fall of 1985 compared with the 1976 national norm sample for these grades:

- The Maryland third grade equivalent results show that our students performed above the national norm sample students. In reading comprehension, Maryland third graders scored 3.6 (3.3 for national norm); for language skills their grade equivalent score was 3.8 (3.4 for national norm); and in mathematics, it was 3.5 (3.1 for national norm).

- Maryland fifth graders exceeded the national norm on reading comprehension, scoring 6.1 as compared to the 5.5 national norm. At 7.1 they scored higher in language skills than the national norm students (5.6), and at 5.9 they scored higher in mathematics (5.3 for national norm).

- Eighth graders in Maryland exceeded the national norms on all three tests. For reading comprehension, their score was 9.8 (8.4 for national norm). With a G.E. of 10.0 they scored above the national norm (8.3) in language skills. In mathematics their score of 9.5 also topped the national norm (8.5).

CHAPTER 1 INTRODUCTION

This report is published to provide the Governor, the General Assembly, the education community, and the general public with information about the progress of Maryland public school students as measured by nationally-normed standardized tests. This chapter describes the concept of educational accountability and provides background information about the Maryland Educational Accountability Program.

1.1 The Definition of Accountability

Simply stated, educational accountability is an attempt to measure, disclose, interpret, and improve results achieved by public school education programs. Its purposes are (1) to promote an understanding of the relationships among the quality of education, the characteristics of educational settings and programs, the processes of education, and needed and available human and material resources and (2) on the basis of this understanding, to make improvements in the educational system.

1.2 The Law

During the 1972 session of the Maryland General Assembly, Article 77, Section 28a, of the Annotated Code of the Laws of Maryland was passed. The law was called the "Educational Accountability Act." Since 1978, however, with the restructuring of the Annotated Code, this same law has become known as §7-203, the Educational Accountability Program (see Appendix A).

The program provides for the establishment of a statewide accountability system to ensure that educational programs lead to the attainment of established goals and objectives (see Appendix C) and to provide information for the analysis of the differential effectiveness of instructional programs.

The program requires: (1) a school-by-school survey of the current status of student achievement in relation to established objectives; (2) the development of programs by each school for meeting its own needs; and (3) the establishment of evaluation procedures for

determining the effectiveness of these programs. Regular re-evaluation of programs, goals, and objectives also is stipulated.

Beginning in January 1975, a yearly report must be submitted by the State Superintendent of Schools to the Governor and the General Assembly. This report of test results must include, but not necessarily be limited to, the progress made by the Maryland State Department of Education, by the local school systems, and by each individual school toward achievement of their respective goals and objectives. Also included should be recommendations for legislation deemed necessary to improve the quality of education in Maryland. This Maryland Accountability Testing Program Annual Report for school year 1985-86 is published to meet this legislative mandate.

1.3 Characteristics of the Maryland Educational Accountability Program

The Maryland State Department of Education (MSDE) views educational accountability as an attempt to explain the results achieved by public school programs. Accountability promotes an understanding of the relationship between the quality of education and available resources and, on the basis of that understanding, brings about improvements in the educational system.

Specifically, Maryland's educational accountability program has three basic characteristics. First is its positive emphasis. It enables a determination of which programs are effective and which are not. Elimination or modification of the ineffective programs and wider dissemination and usage of the effective ones then can lead to general improvement of educational programs and opportunities for all students.

Second, the educational accountability program is more than a testing program. A testing program logically can be a part of an accountability program, but it is by no means the whole program. It is more important that test results be interpreted in terms of local objectives and not solely in terms of national norms.

Finally, there is the reciprocal nature of accountability; that is, an accounting is demanded of all personnel, not just of teachers. Teachers can achieve most effectively when supplied with adequate and appropriate resources, constructive working conditions, and

effective and supportive school administrators. Accountability for providing teachers with these resources, support services, and conditions falls on individuals (at all levels) who are outside the classroom.

1.4 Program Implementation

The state plan for the implementation of the educational accountability program is part of Maryland's comprehensive program assessment plan for school year 1985-86, which is described in The Maryland State Department of Education Assessment Program: Resource Paper No. 3. This plan was designed both to establish an integrated statewide testing program and to facilitate the development of the Project Basic graduation prerequisites. Specific details and responsibilities for administering the program are found in the Maryland Accountability Coordinator's Handbook.

In the plan adopted by the Maryland State Board of Education in 1979, the norm-referenced tests selected for accountability purposes (the California Achievement Tests) are combined with the criterion-referenced tests for basic skills (the Maryland Functional Reading Tests, the Maryland Functional Mathematics Tests, the Maryland Functional Writing Tests, and the Maryland Test of Citizenship Skills) into a statewide assessment strategy for the 1980s. This assessment strategy will serve the following purposes:

1. To provide local school systems with diagnostic evaluation of their instructional programs;
2. To certify student acquisition of graduation prerequisites in basic skills (reading, mathematics, and writing) as well as citizenship skills;
3. To explain the results achieved by public school programs; and
4. To promote an understanding of the relationship between the quality of education and available resources and, on the basis of that understanding, to make educational improvements.

This report deals only with the norm-referenced component of the MSDE assessment program.

1.5 The Norm-Referenced Component of the Maryland Educational Accountability Program

On September 26, 1979, the Maryland State Board of Education adopted Resolution 1979-46: The Maryland State Department of Education Assessment Program for Students (see Appendix B). That resolution specifies, among other items, that the state will use the California Achievement Tests (CAT), published by CTB/McGraw Hill and copyrighted 1977, 1978, as the statewide norm-referenced tests beginning in the 1980-81 school year. Major reasons for selecting the California Achievement Tests were:

1. The CAT was the choice of the Advisory Task Force on Statewide Assessment over other norm-referenced tests because it met the nine selection criteria used at that time:
   - Accepted standards of validity and reliability;
   - The relationship of the content of the test to instructional goals and objectives of the state and local school systems;
   - The ability to utilize data generated by the tests to shape instructional decisions for groups of 30 or more;
   - The tests' norming population characteristics, as compared with known characteristics of Maryland students;
   - The demonstration of the tests as being non-discriminatory towards blacks and other minorities;
   - The ability to approximate criterion-referenced scores from norm-referenced test scores;
   - The willingness of the test publisher to provide customized scoring services;
   - The possibilities offered for out-of-level testing; and
   - The differential cost of each alternative test.
2. The CAT closely matches the curriculum programs of the local education agencies (LEA's)[1] as well as MSDE goals, competencies, and related objectives;
3. CAT tests were already in use in several LEA's in Maryland; and
4. Maryland students from Baltimore City and other areas participated in the initial norming of the CAT.

---

[1] LEA's refer to county and city school systems

Levels 13C (grade 3), 15C (grade 5) and 18C (grade 8) are to be used for accountability testing. The complete CAT battery of tests for each level is available. However, the state reporting requirements are limited to the following subtests: reading comprehension, language total, and mathematics total.

1.6 Administrative Responsibility for the Maryland Educational Accountability Program

The responsibility for carrying out the accountability program rests with all levels of the professional education community. The teachers, supervisors, and administrators must be cognizant of the responsibilities at each level so that expectations are clear to all participating personnel.

Responsibilities at the state level include overall planning and coordinating of the program; providing support and assistance to school systems in reporting assessment data; providing the Governor and the legislature with a report based on Maryland Accountability Program results; implementing accountability legislation; developing a procedure for receipt, storage, and security of assessment data; and providing school systems with criteria for identifying pupils to be excluded from assessment.

The responsibilities for administration of the program at the school system level reside with local accountability coordinators, school principals, and teachers. Such a delineation of responsibility is an attempt to ensure that the administration of the CAT and other statewide tests is carried out under uniform conditions and that results are reported systematically and consistently.

CHAPTER 2 STATE, LOCAL EDUCATION AGENCY, AND SCHOOL LEVEL ASSESSMENT INFORMATION

2.1 Introduction

In the following pages state level average grade equivalent scores on the California Achievement Tests (administered in the fall of 1985) are presented and discussed for grades 3, 5, and 8. Subsequently, summary data for each local education agency (LEA) are provided with a school-by-school listing of grade equivalent scores for these grades in reading comprehension, language skills, and mathematics skills.

A brief longitudinal profile of Maryland's public schools' enrollment and educational resources is introduced to provide some background information on the state's public education program.

2.2 General Characteristics of Public Schooling in Maryland

During the 1985-86 school year, public education was the primary activity of nearly 750,000 persons in the State of Maryland. The state's total expenditure for its educational program was $2.6 billion with an average cost per pupil of $3,920. The system employed a professional staff of over 71,000 to help educate approximately 671,500 students attending 1,220 public institutions throughout Maryland.

Tables 2-1 and 2-2 illustrate some important longitudinal trends in the state's educational processes. These trends may be identified as follows:

- Public schools' enrollment has shown a steady decline in the past decade.
- The average daily attendance percentage has remained relatively stable.
- There has been consistent improvement in the pupils-per-teacher ratio in the past ten years.
- There has been a considerable improvement in the professional educational qualifications of Maryland teachers and administrators.

Table 2-1. Staff level -- comparison of educational characteristics, by school year

School year	Total enrollment	Avg. daily attendance (percent)	Avg. number of pupils per staff member (1)
1976-77	860,779	92.7	17.9
1977-78	837,807	93.4	17.6
1978-79	809,933	93.2	17.2
1979-80	777,725	93.3	16.6
1980-81	750,776	92.0	16.4
1981-82	721,841	91.6	16.2
1982-83	699,455	91.4	16.1
1983-84	683,491	91.3	16.0
1984-85	673,840	91.9	16.7
1985-86	671,560	91.8	16.1

(1) - Based on the number of permanent professional staff

Table 2-2. Characteristics of teaching staff

School year	Number of professional staff (1)	Average salary of teachers (in dollars)	Percent professional staff with master's degree or above
1976-77	48,311	14,755	34.5
1977-78	47,731	15,616	38.2
1978-79	47,376	16,426	39.7
1979-80	46,882	17,685	41.6
1980-81	45,797	NA	43.0
1981-82	44,658	21,032	46.1
1982-83	42,877	22,800	46.7
1983-84	42,530	24,100	46.9
1984-85	42,841	25,861	47.4
1985-86	43,454	26,777	47.5

(1) - School level professional staff

- While Maryland's public school enrollment declined by slightly less than 22 percent in the past ten years, the number of professional staff employed decreased by 10 percent during the same period, resulting in considerable improvement in the state's pupils-per-teacher ratio.

When Maryland's schools and educational financing are compared with the United States as a whole, Maryland takes a strong and healthy position. Comparison with the national educational profile can highlight these results:

- The median number of school years completed by Maryland residents 25 years of age or older is slightly higher (12.7 years) than that of the United States as a whole (12.6 years), according to the Digest of Education Statistics, 1985-86.

- The number of pupils enrolled per teacher in public elementary and secondary schools of Maryland (17.7) in the fall of 1985 was slightly better than the national ratio of 18.2 pupils per teacher. (Source: National Education Association Research Memo, Ranking of the States, 1985).

- The estimated expenditure per public elementary and secondary pupil in Maryland was $3,694 and noticeably above the national average of $3,209. This ranks Maryland eighth highest in the United States. (Source: National Education Association Research Memo, Ranking of the States, 1985).

- The average annual salary of Maryland's instructional staff ($26,777) compares favorably with that of the United States ($24,826), according to the National Education Association Research Memo, Ranking of the States, 1985. This also ranks Maryland eighth highest in the United States.

2.3 State Level -- Accountability Assessment Information

MARYLAND

State Level Test Results

Table 2-3 shows, by grade level, the state average grade equivalent (G.E.) scores on selected subtests of the California Achievement Tests (CAT). These average grade equivalent scores were computed from student data.

Interpretation of test scores is facilitated if they are thought of as descriptive of the "average" Maryland student, although such a person does not exist in reality. These data are subject to error in interpretation or varying points of view on what the students should have learned. Yet the larger question remains: Are the observed average grade equivalents good, bad, or indifferent?

Table 2-3. Maryland state level -- average grade equivalent scores for CAT subtests (reading comprehension, language total, mathematics total), 1981-82, 1982-83, 1983-84, 1984-85, and 1985-86

		California Achievement Test		
Grade level	School year	Reading comprehension	Language total	Mathematics total
3	1981-82	3.4	3.6	3.3
	1982-83	3.5	3.7	3.4
	1983-84	3.5	3.7	3.4
	1984-85	3.6	3.8	3.5
	1985-86	3.6	3.8	3.5
5	1981-82	5.8	6.4	5.5
	1982-83	5.7	6.6	5.6
	1983-84	5.9	6.7	5.7
	1984-85	6.0	7.0	5.9
	1985-86	6.1	7.1	5.9
8	1981-82	9.3	9.2	9.0
	1982-83	9.3	9.4	9.0
	1983-84	9.7	9.7	9.2
	1984-85	9.8	9.8	9.3
	1985-86	9.8	10.0	9.5

An obvious approach to finding the answer to this question is a comparison of Maryland scores with the "national norms." Many people understand the term "national norm" to be a scoring level which would be "normal" or "expected" for an average student at a particular grade level. But no such meaning is implied in the official use of this term by those who established the norms or by those who make professional reference to them.

In making such comparisons it is important to take into account a number of understandings and limitations associated with grade equivalent scores:

- Grade equivalent scores indicate the average performance of students at various grade levels. For any particular grade equivalent, 50 percent of the students in the national norm sample are above this norm and 50 percent below. Consequently, a particular grade norm should not be interpreted as something all of our students should attain. If half of our students are above norm and half are below, it may be concluded that our students compare

favorably with the students in the national norm group. Whether this condition is good or bad depends on several factors, such as the ability of our students, the extent to which the learning outcomes measured by the test reflect our curriculum emphasis, and the quality of educational facilities at our disposal. If our students have above-average ability and are being taught under conditions comparable to those of the schools in the norm group, merely matching the norm would be cause for concern. On the other hand, if our pupils or educational facilities are inferior to those in the norm group, reaching the norm could be a matter of considerable pride. In any case, it is well to remember that the norm is merely an average score made by students in the standardization group. As such, it represents the typical performance of average students in average schools and should not be considered a standard of excellence to be achieved by others.

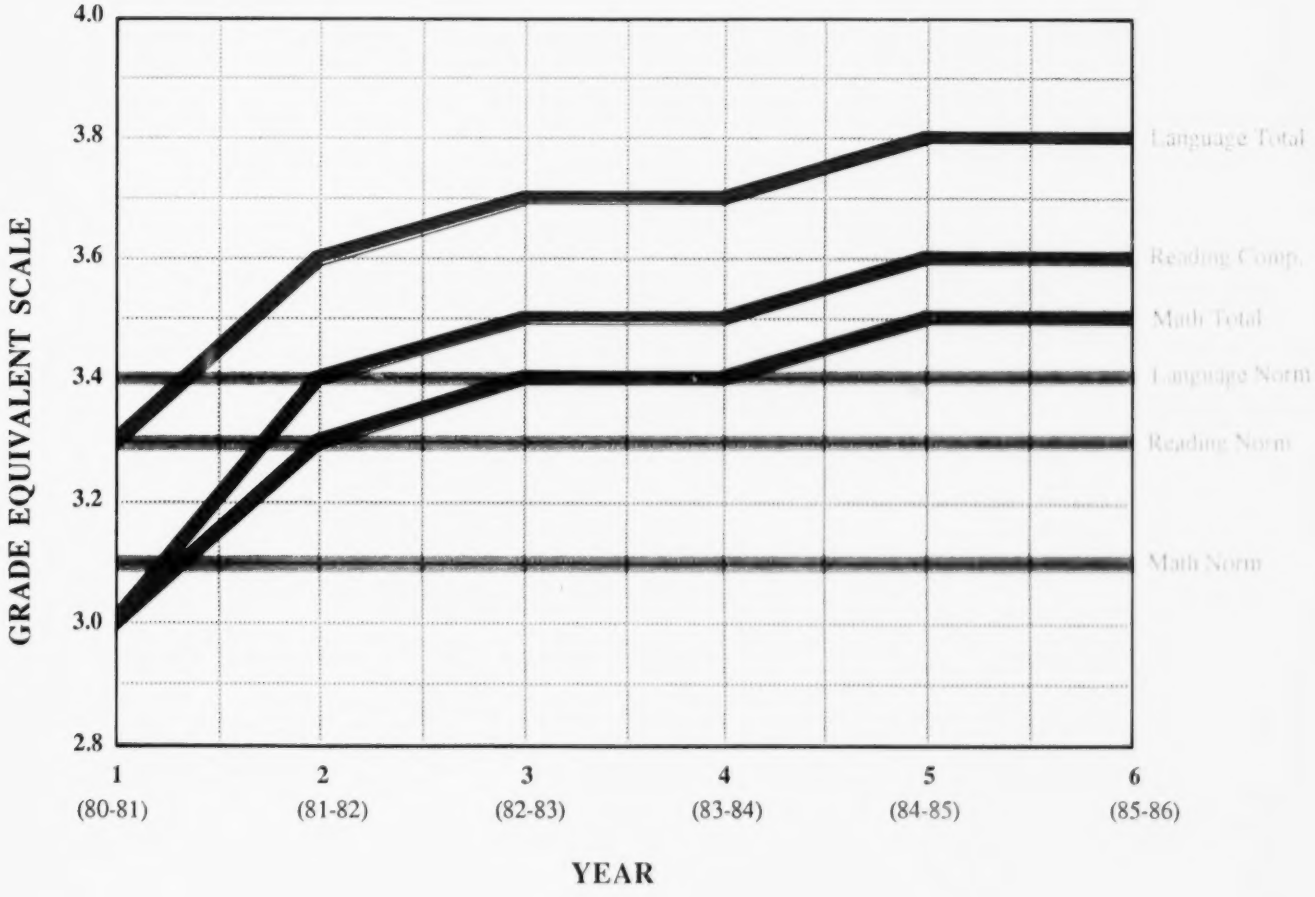
- The popularity of grade norms or grade equivalent scores is largely due to the fact that test performance is expressed in units that are apparently easy to understand and interpret. One serious limitation of grade norms is that the units are not equal on different parts of the scale or from one test to another. A year of growth in arithmetic achievement from grade 4.0 to 5.0, for example, might represent a much greater improvement than an increase from grade 2.0 to 3.0 or grade 8.0 to 9.0. Unequal units result from the fact that growth in school subjects is uneven. An additional complication is that patterns of growth vary from subject to subject so that grade units stretch and contract at different points of the scale and different subjects. In general, grade equivalents provide units which are most comparable when used at the elementary level in those areas receiving relatively consistent instructional emphasis - mathematics, language skills, and reading.

- An additional limitation is that high and low grade equivalent scores have dubious meaning. Raw scores corresponding to grade equivalents below grade 3 and above grade 9 are usually estimated (by extrapolation) rather than determined by measurement. This procedure results in artificial units that do not correspond to the achievement of pupils in any particular group. Estimating these grade equivalents is often necessary because the younger students do not have the needed skills to take the test and because growth in the basic skills tends to level off in the eighth and ninth grades.

- Another common misinterpretation of grade norms, although not due to weaknesses in the scoring system itself, is to assume that if a student earns a certain grade equivalent score in a subject, he or she is ready to do work at that level. For example, it might be concluded that a fourth-grade student should be doing sixth-grade work in language skills if he or she earns a grade equivalent of 6.0 on a language skills test. The grade equivalent score of 6.0, however, may represent nothing more than a thorough mastery of language skills taught in the first four grades. Thus, grade equivalents should never be interpreted literally. Students at different grade levels who earn the same grade equivalent score are apt to be ready for quite different types of instruction.

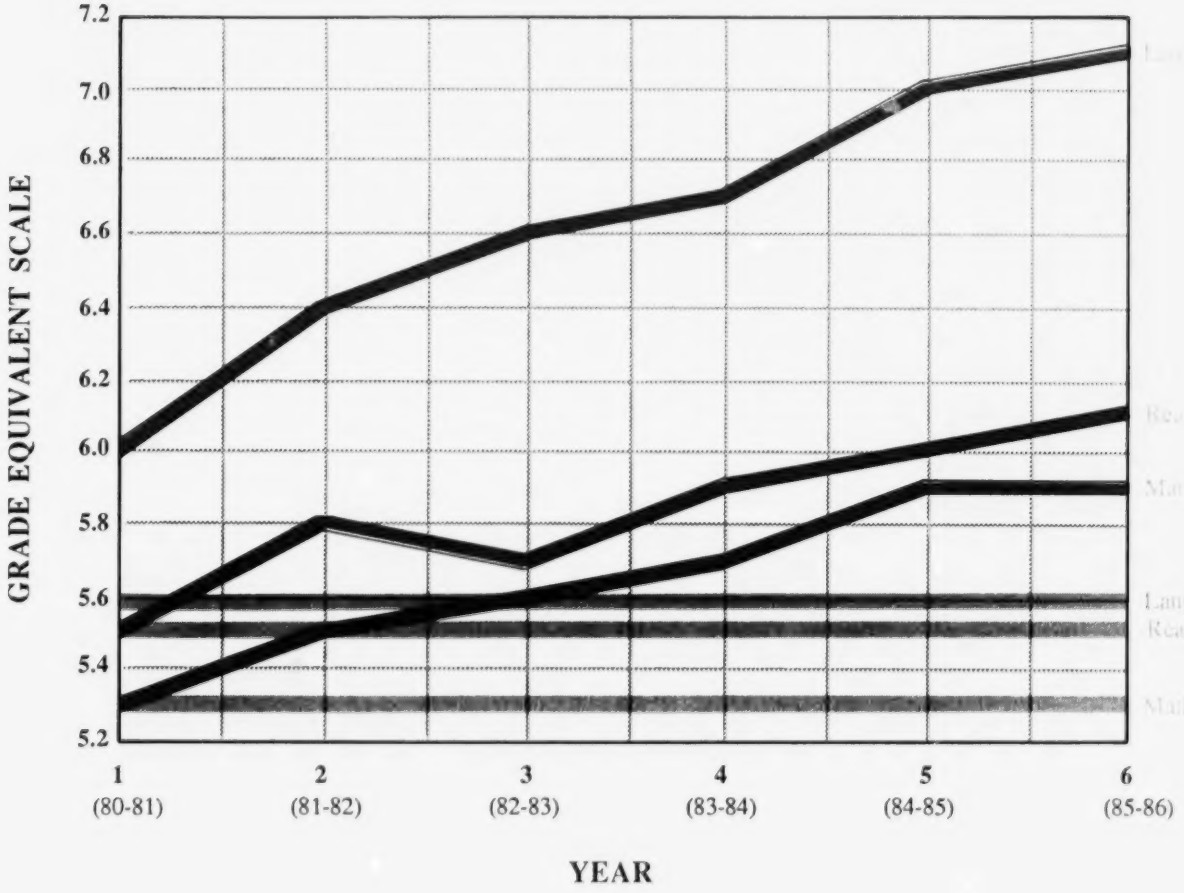
Taking into account all of these precautions against both stringent over-interpretation and unwarranted ignoring of the data, what does Table 2-3 tell us about the basic skills achievement of the "average" Maryland student for the 1985-86 school year? The following are some pertinent observations, by grade level, which constitute a partial answer to this question.

Figure 2-1. Grade Equivalent Test Results--Third Grade



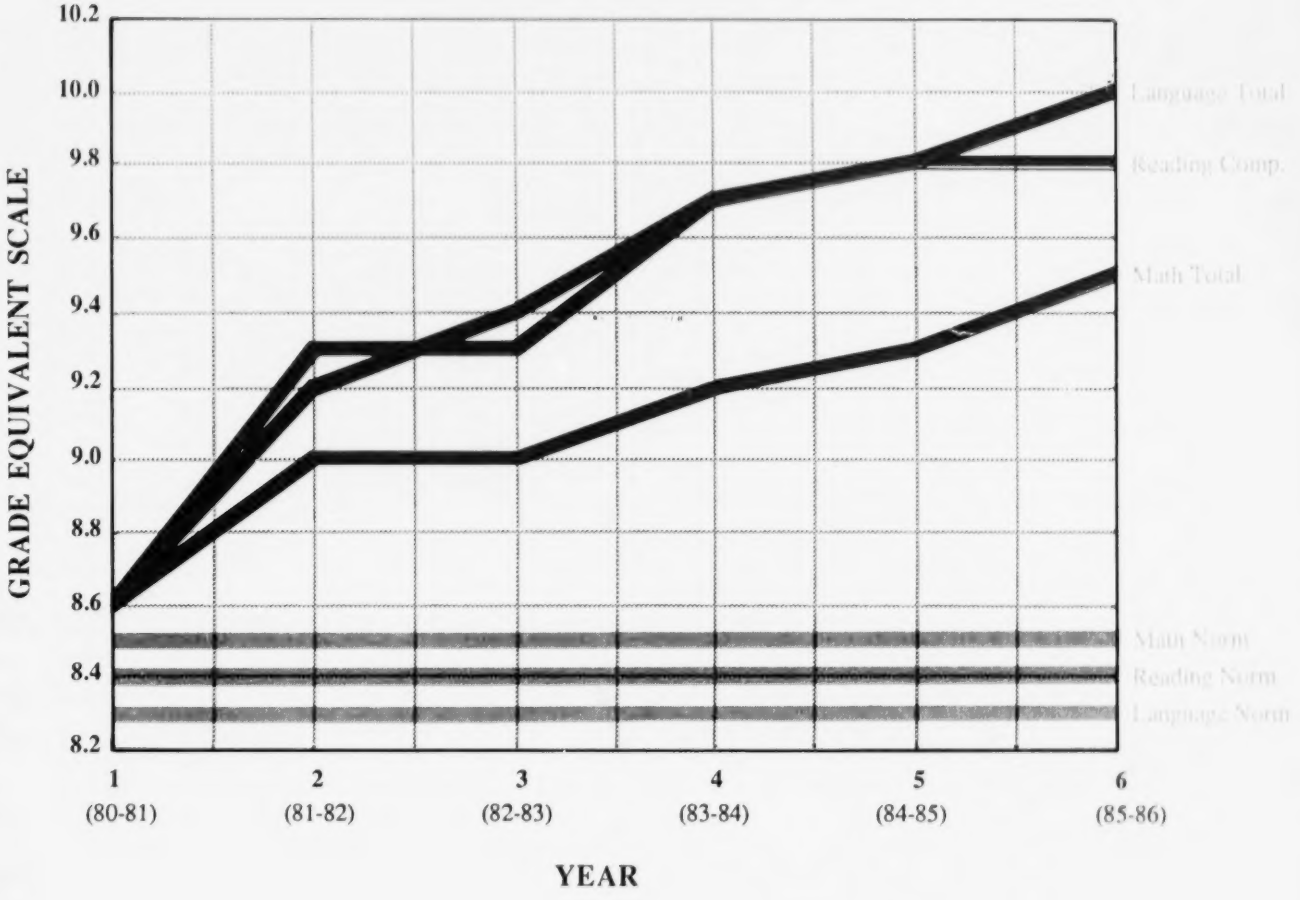
The Maryland third grade equivalent results show that our students performed above the national norm sample students. In reading comprehension, Maryland third graders scored 3.6 (3.3 for national norm); for language skills their grade equivalent score was 3.8 (3.4 for national norm); and in mathematics, it was 3.5 (3.1 for national norm).

Figure 2-2. Grade Equivalent Test Results--Fifth Grade



Maryland fifth graders exceeded the national norm on reading comprehension, scoring 6.1 as compared to the 5.5 national norm. At 7.1 they scored higher in language skills than the national norm students (5.6), and at 5.9 they scored higher in mathematics (5.3 for national norm).

Figure 2-3. Grade Equivalent Test Results--Eighth Grade



Eighth graders in Maryland exceeded the national norms on all three tests. For reading comprehension, their score was 9.8 (8.4 for national norm). With a G.E. of 10.0 they scored above the national norm (8.3) in language skills. In mathematics their score of 9.5 also topped national norms (8.5). In both language skills and mathematics, G.E. scores showed marked improvement over the previous year's test results.

The overall pattern of consistent improvement in performances of these students over the previous years' classes is most encouraging. The 1985-86 Maryland scores not only show continual improvement over the preceding years, but also exceed the national norm sample scores in each category.

2.4 Local Education Agency Level Data, 1985 - 1986

ALLEGANY COUNTY

■ Systemwide average G.E. scores for the CAT subtests are shown below, by grade level:

			California Achievement Test		
Grade level	School year	Number tested	Reading comprehension	Language total	Mathematics total
3	1981-82	796	3.4	3.5	3.2
	1982-83	752	3.5	3.7	3.3
	1983-84	797	3.6	3.6	3.3

APPENDIX A **Public School Laws of Maryland**
§ 7-203, Education Accountability Program[1]

(a) **Program established.** - The State Board, the State Superintendent, each county board, and each public school shall implement a program of education accountability for the operation and management of the public schools.

(b) **Contents of Program.** - The education accountability program shall include the following:

(1) The State Board and the State Superintendent shall assist each county board to establish educational goals and objectives that conform with statewide educational objectives for subject areas including reading, writing, and mathematics;

(2) With the assistance of its county board, each public school shall survey current student achievement in reading, language, mathematics, and other areas to assess its needs;

(3) Each public school shall establish as the basis for its assessment of its needs, project goals and objectives that are in keeping with the goals and objectives established by its county board and the State Board;

(4) With the assistance of its county board, the State Board, and the State Superintendent, each public school shall develop programs to meet its needs on the basis of the priorities it sets;

(5) Evaluation programs shall be developed at the same time to determine if the goals and objectives are being met; and

(6) A reevaluation of programs, goals, and objectives shall be undertaken regularly.

(c) **Standardized testing not the only measurement.** - National standardized testing may not be the only measure for evaluating educational accountability.

(d) **Assistance from Department.** - The Department shall assist each county board to establish an education accountability program by providing:

(1) Guidelines for development and implementation of the program by the county boards; and

(2) Assistance and coordination where it is needed and requested by the county boards.

(e) **Annual report.** - The State Superintendent shall send the Governor and the General Assembly a report each January that includes:

---

[1] This section formerly appeared as Article 77, §28A, Maryland Public School Laws.

(1) Documentation of the progress of the Department, the county boards, and each public school in this State towards their respective goals and objectives; and

(2) Recommendations for legislation that the State Board and the State Superintendent consider necessary to improve the quality of education in this State.

(f) **Funding.** - On the recommendation of the State Superintendent, the State Board shall include in its annual budget request the funds it considers necessary to carry out the provisions of this section. (An. Code 1957, Art. 77 28A; 1978, Ch. 22, 2.)

APPENDIX B **Maryland State Board of Education**
Resolution on Assessment Program

September 26, 1979

Resolution 1979-46 Re: **Maryland State Department of Education Assessment Program for Students**

WHEREAS, the paper, "Maryland State Department of Education Assessment Program," gives direction to student assessment for the next six years.

WHEREAS, the direction makes assessment an integral part of instruction through a design of maximum teaching and minimum testing time; now, therefore, be it

RESOLVED, that the paper, "Maryland State Department of Education Assessment Program," be adopted as the direction for student assessment in Maryland. The paper outlines several unresolved issues for further study and appropriate action by the State Board of Education such as: special populations, placement of early life skills, certification procedures for the arts/physical education, and schedule for graduation prerequisites.

RESOLVED, that the purposes for statewide assessment are:

1. To provide local systems with diagnostic information about the effectiveness for students of selected parts of their instructional programs;
2. To certify student acquisition of graduation prerequisites in Basic Skills (reading, mathematics, writing) and Life Skills (citizenship, work, survival); and
3. To certify student participation in instructional programs encompassing graduation prerequisites in the Arts/Physical Education.

RESOLVED, that the Maryland State Department of Education Assessment Schedules for 1979-80 and 1980-81 school years be adopted.

RESOLVED, that the Maryland State Department of Education Reporting Schedule beginning in 1979-80 school year be adopted.

RESOLVED, that the norm-referenced test for the State beginning in the 1980-81 school year be the California Achievement Tests, Forms C and D as published by CTB/McGraw Hill and copyrighted 1977, 1978.

RESOLVED, that the State Board of Education direct the Maryland State Department of Education to proceed on the issues of Special Populations and Graduation Prerequisite Schedule.

RESOLVED, that during the transition period the Maryland State Department of Education will develop a table of "translation" values between the current and new tests in order to continue baseline data.

APPENDIX C **Maryland Prerequisites for Graduation**

TITLE 13A
STATE BOARD OF EDUCATION
Subtitle 03 GENERAL INSTRUCTIONAL PROGRAMS

13A.03.01 General Standards

Authority: Sections 2-205(h), 7-204 and 8-403(a),
Education Article of Annotated Code of Maryland

.04 Competency Prerequisites for Graduation, Including Requirements, Revisions, Instruction and Assessment Schedule, Appropriate Assistance, Certification by Panel, Attendance Requirements, Exceptions and Records.

A. Requirement. Beginning in 1982 public high school students shall meet the graduation requirements set forth in COMAR 13A.03.02 and at a minimum shall fulfill competencies adopted by the State Board of Education as set forth in the Declared Competencies Index which is incorporated by reference, and in accordance with Regulation .04C.

B. Revision. The Declared Competencies Index shall be subject to continuing review and revision in 1982 and shall be reviewed, at a minimum, every 6 years after that.

C. Instruction and Assessment Schedule.

(1) Local education agencies shall continue to provide instruction to students in all objectives listed in the Declared Competencies Index.

(2) Local education agencies shall implement graduation prerequisites for students as described below and assess them in accordance with the State Department of Education Testing Schedule:

(a) Reading. Students entering Grade 9 during the 1978-79 school year and each school year after that shall pass the Maryland Functional Reading Test as a prerequisite for graduation.

(b) Mathematics. Students entering Grade 9 during the 1983-84 school year and each school year after that shall pass the Maryland Functional Mathematics Test as a prerequisite for graduation.

(c) Writing. Students entering Grade 9 during the 1983-84 school year and each school year after that shall pass the Maryland Functional Writing Test as a prerequisite for graduation.

(d) Citizenship. Students entering Grade 10 during the 1984-85 school year and each school year after that shall pass the Maryland Test of Citizenship Skills as a prerequisite for graduation.

(e) Arts/Physical Education. Effective September 1, 1983, students shall participate in an approved program of the Arts/Physical Education in accordance with the provisions of COMAR 13A.04.07.

(f) World of Work. Effective September 1, 1985, students shall participate in an approved program of the World of Work in accordance with the provisions of COMAR 13A.04.10.

(3) Each year the State Department of Education Testing Schedule shall be announced by the State Department of Education.

(4) Assessment procedures and guidelines including provisions for handicapped students shall be the same as those issued for the Education Accountability Program by the State Department of Education.

D. Appropriate Assistance Programs. Local education agencies shall provide an appropriate assistance program or programs to students in grades 9-12 who have not passed the competency assessment test or tests. Programs shall be developed to support student's efforts to strengthen areas of weaknesses. These programs may include but not be limited to providing alternative instructional strategies, flexibility in schedules, and a wide variety of instructional materials. Students shall be provided the opportunity to retake the appropriate competency assessment test or tests in accordance with the testing schedule issued by the State Department of Education.

E. Certification by Panel. This section applies only to the competency prerequisite for reading as set forth in Regulation .04C(2)(a) and shall expire on June 30, 1986. Local education agencies shall provide for certification by panel consistent with the requirements set forth below for students who have been enrolled for a minimum of 3-1/2 years in high school and who have not fulfilled the required competency prerequisites by the second semester of grade 12. The requirements are the following:

(1) Students with a school history of being unable to perform paper and pencil assignments may, with the approval of the local superintendent, use tasks other than pencil and paper to demonstrate the required reading prerequisite before a panel of at least three professional school staff members.

(2) An annual review shall be conducted at each high school of the status of each grade 12 student who has not passed the Maryland Functional Reading Test after the fall administration to identify students eligible for certification by panel.

(3) To be eligible for certification by panel, a student shall have a documented history of difficulty in dealing with paper and pencil assignments, including but not limited to group formal assessment tasks. For this documentation, it is not sufficient to refer to scores the student has achieved on other tests. Evidence shall be provided that formal assessment assignments are in themselves a barrier to the student's demonstrating his or her competence in reading. The evidence shall show how the school staff responded to earlier determinations that the student has these difficulties. Appropriate assistance for the students shall have included the use of other modes for instructing and assessing reading. In requesting a panel there shall be a reasonable expectation based on classroom performance that the student will be able to demonstrate the required reading prerequisite.

(4) The composition of the panel and its procedures shall be established for systemwide use and approved by the local superintendent and the State Superintendent of Schools.

(5) The panel shall have a minimum of three persons. It shall consist of central or regional office administrators or supervisors, including a person or persons knowledgeable in the area of reading. The local superintendent should be sensitive to the racial and sexual composition of the panel.

(6) The State Department of Education shall provide the local education agencies with functional reading materials to be used by the panel. The material shall cover objectives from each of the domains assessed by the Maryland Functional Reading Test. The student shall be required to read these materials and answer questions in the presence of the panel.

(7) The panel shall make a professional judgment and certify by at least a majority decision that the student in the presence of the panel members demonstrated the required reading prerequisite.

(8) Documentation of the panel's action on each student shall be filed and a report of the decision sent to the local superintendent. A report on students certified by panel shall be included in the annual report submitted to the State Department of Education.

F. Students Completing Attendance Requirements. Students who have been enrolled for 4 years of high school and who at the end of grade 12 have not fulfilled the competency prerequisites for graduation may, with the approval of the local superintendent, return to the high school to enroll in day, evening or summer appropriate assistance programs whenever they are available. A diploma may be granted upon fulfillment of the competency prerequisites if all other graduation requirements were met.

G. Exemptions.

(1) Transfer Students. Students transferring into the Maryland public school system after the first semester of their senior year are exempt, unless these students request and receive a waiver of this exemption from the local superintendent of schools.

(2) Handicapped Students in Level I through III Special Education Placements. Students determined to be handicapped in accordance with COMAR 13A.05.01.05 and in a Level I, II, or III special education placement (see COMAR 13A.05.01.06E(3)(a),(b), (c)) who were enrolled in grades 9-12 at any time during the 1981-82 school year shall be exempt from the reading competency graduation prerequisite. These students shall continue to be provided with instruction in a reading competency program and shall continue to be administered the Maryland Functional Reading Test according to Regulation .04C(4) and (5). If one of these students receives instruction in a reading competency as part of a special education program, it shall be reflected in the student's Individualized Education Program (see COMAR 13A.05.01.06D).

(3) Handicapped Students in Level IV and Level V Special Education Placements. Students determined to be handicapped in accordance with COMAR 13A.05.01.05 and in a Level IV or V special education placement (see COMAR 13A.05.01.06E(3)(d) and (e)) shall be exempt from the competency prerequisites until the 1985-86 school year. Handicapped students in Level IV or V placements prior to completion of their elementary and secondary education shall be provided with the opportunity to receive instruction in the competencies as appropriate

to their individual needs. Effective September 1, 1983, handicapped students in Level IV and V placements in grades 9-12 shall be provided with the opportunity to be administered the competency test or tests in accordance with Regulation .04C(4) and (5). Handicapped students in Level IV and V special education placements who enter grade 9 during and after the 1985-86 school year shall be included in this regulation and shall have the opportunity to fulfill the competency prerequisites as a requirement for graduation. Handicapped students in Level IV and V special education placements who entered grade 9 before the 1985-86 school year continue to be exempt. Decisions concerning the extent of a Level IV or V handicapped student's instruction in the competencies and the administration of the competency test or tests shall be made during the admission, review, and dismissal process (see COMAR 13A.05.01.06c) and shall be indicated in the student's Individualized Education Program (see COMAR 13A.05.01.06D).

H. Records.

(1) Records of competency fulfillment shall be kept for individual students in accordance with the Maryland Student Records System, Manual of Instructions, June, 1981, which is incorporated by reference. (See COMAR 13A.08.02 Individual Student Records.)

(2) Records for handicapped students shall be kept in accordance with Sections G(2) and (3) and regulations of the State Board of Education for Individualized Education Programs (see COMAR 13A.05.01.06D).

(3) The school principal shall ensure that all students and their parents or guardians are informed of Maryland's graduation requirements and the result of each competency assessment. Information and records will include:

(a) Conditions of fulfilling or not fulfilling the prerequisites;

(b) The need for instruction in the competencies, if any;

(c) A plan for appropriate assistance instruction, if needed, on file at the school for review; and

(d) An approximate time for further test administration, if needed.

(4) The school principal shall inform students and their parents or guardians of exemptions from the requirements, if applicable. Appropriate records shall be maintained.

(5) Records for the programs in the Arts and Physical Education shall be kept in accordance with provisions of COMAR 13A.04.07.

(6) Records for the programs in the World of Work shall be kept in accordance with provisions of COMAR 13A.04.10.

APPENDIX D Instruments Used to Measure Academic Achievement

1. Introduction

A nationally standardized measurement instrument was the source of data collected on student achievement in Maryland. The California Achievement Tests (CAT), Form C, 1977 edition, was selected to assess academic achievement.

The CAT was administered to all Maryland public school children in grades 3, 5, and 8 during the period of October 20 to November 21, 1985.

The academic achievement data presented in the tables of this report are based on the average score made by a grade in a school. No data on individual students or individual classrooms are published. Each local school system collected its own data on individual students and classrooms in relation to its own needs for program or pupil appraisal and diagnosis.

2. Description of Instruments Used

2.1 California Achievement Tests (CAT)

The following subtests of the CAT were selected for use as indicators of academic achievement. The brief descriptions that follow give a general indication of the skills required for success on each test.

- **Reading Skills**

  Reading Comprehension. Reading comprehension in CAT C has been divided into literal, interpretive, and critical comprehension.

  1. Literal comprehension requires students to understand what is actually stated in a passage.

  2. Interpretive comprehension requires students to think inferentially and to understand what is implied in a passage.

3. Critical comprehension requires students to evaluate and make judgments about material they read.

- **Language Skills**

Language, whether written or spoken, is our most effective means of communication. The language tests of CAT C are based primarily on current programs of traditional grammar. The emphasis is on how language is used rather than on terminology.

The language area was divided into two tests to distinguish between the mechanical aspects of writing and the actual expression of ideas or points. Language Mechanics deals with the problems of capitalization and punctuation, the mechanics needed to clarify written material. Language Expression tests word usage, sentence structure, and paragraph organization and development.

Language Mechanics. This test is concerned with the students' ability to capitalize and punctuate. Items for the lower level test involve the simplest rules of capitalization (i.e., proper nouns) and punctuation (i.e., period, exclamation point). More difficult rules are covered in the items concerning such things as capitalization of proper adjectives and use of quotation marks, colons, and semicolons.

Language Expression. This test is concerned with students' abilities to apply their knowledge of language in their written work. All items were designed to measure students' understanding of skills closely related to effective written expression. A variety of items are included to test word usage and understanding of sentence structure and paragraph organization. None of the items in this test requires the student to define terms or to explain rules.

- **Mathematics Skills**

The stress in mathematics today is on teaching skills and concepts that can be successfully applied to the tasks of daily living.

The mathematics tests in the California Achievement Tests, Forms C and D, cover computation skills, concepts, and their applications. The emphasis is on material that is relevant to today's world.

Mathematics Computation. CAT C and D contain a sampling of computation skills commonly taught and understood at each grade level. Depending on the level of the test, there are items covering addition, subtraction, multiplication, and division of whole numbers, fractions, mixed numbers, decimals, and algebraic expressions.

Mathematics Concepts and Applications. The Concepts and Applications tests include a sampling from a wide range of mathematics skills. The emphasis in these tests is on concepts rather than on isolated facts.

The achievement test scores are expressed by G.E. (grade equivalent) scores. The first digit represents the grade and the second digit the month within the grade. A G.E. of 5.7 would be read fifth grade, seventh month.
